

RAT TRAP II

The Rat Trap II is a small, pocket size tire deflator that is designed to prevent stationary vehicles from fleeing. Deflates tires safely in 5 seconds or less.

Benefits:

- Prevents pursuits
- Lowers costs
- Reduces liability
- Fits in shirt pocket
- Always ready for use

Applications:

- Warrant service
- Stolen vehicle surveillance
- SWAT operations
- Any time that an officer feels like a suspect might try to flee

Small, Quick and Easy

Remove the Rat Trap II from your shirt pocket, open it, and place it under the suspect's tire. If the suspect attempts to flee, the Rat Trap II will quickly deflate the tire. In moments, the slower speed of the vehicle will force the suspect to stop. Once the Rat Trap II unit is deployed, simply replace the spikes in the unit.
