

New option – low-profile Hook Mount for Integrity® lightbars

Federal Signal announces a new mount foot option for the Integrity® lightbar. Integrity lightbars can now be ordered with a new **“Low Hook”** low-profile, hook-on mount option.

The new **“Low Hook”** option allows the body of the lightbar to be approximately 5/8 of an inch lower than the standard **“Hook”** mount, depending on the specific vehicle make/model.

HOW TO ORDER

The screen shot shows the MOUNT options available for the Integrity lightbar. To configure your Integrity lightbar with the new low-profile hook mount, simply select the **“Low Hook”** option from the Mount drop-down menu within our Online Lightbar configurator. As with the other mount options, there is no additional price for selecting the new **“Low Hook”** option.

**ORDERING NOTES**

Note that this new option is NOT COMPATIBLE with Federal Signal's 795H-EXT external Opticom mounting option. When ordering an Integrity with the 795H-EXT option, use the standard "Hook" mount option.

This new option is NOT COMPATIBLE with Federal Signal's MBK04 bracket kit for attaching an MB1 LED message board to an Integrity lightbar. When ordering an Integrity lightbar with the MBK04 bracket kit, use the standard "Hook" mount option.

AVAILABILITY

Orders for Integrity lightbars with the new "**Low Hook**" option can be processed now. Initial deliveries of lightbars with this option will begin in June 2017.
