- Light output dimming control to avoid flashback
- UV stable and shatterproof
- No tools, brackets or sticking materials required
- Five-year warranty

Highly-effective visor light ideal for undercover police cars

Federal Signal's FSX Visor Light provides clear identification and temporary marking for undercover and unmarked police cars. The FSX Visor Light has (6) Red and (6) Blue LEDs and features "POLICE" text. The FSX Visor Light can be set as an attention-getting flash pattern or "steady-burn." It also incorporates a light-output dimming feature to avoid flashback inside the vehicle.

Easy removal and storage

The FSX Visor Light slides over the vehicle's existing sun-visor and plugs into the cigarette plug. When not in use, the sign can easily be hidden by disconnecting the FSX Visor Light from the cigarette plug using the detachable adapter and folding the vehicle's sun-visor in the upright position. The Visor Light easily slides off of the sun-visor and can be stored inside the glove box.

Text can be set to flash or "steady burn"

FSX Visor Light is shown on a Ford Interceptor Utility
