## SelecTone® 30 W Amplified Speakers

Model 302GC SelecTone® Amplified Speaker is designed to produce crisp, clear tones, digital voice messages, and live public address in harsh environments with high ambient noise levels.

The speaker cone and projector are manufactured from rugged spun aluminum for enhanced durability. Internal components—including the circuitry, tone module, and gain control—are housed within a die-cast aluminum enclosure. All external surfaces feature a protective powder-coat finish, while dust- and moisture-resistant gaskets ensure reliable performance in harsh environmental conditions.

SelecTone Amplified Speakers are used individually or as part of a plant-wide emergency notification system. Model UTM Universal Tone Module with (32) tones, or model TM33-SD Custom Tone Module is plugged into a single SelecTone Amplified Speaker for stand-alone use or into a SelecTone Command Unit for plant-wide signaling.

For plant-wide signaling, a Connector Kit is installed into each SelecTone Amplified Speaker and wired to a central controller. SelecTone Command Units and CommCenter® Digital Message Centers broadcast tones, voice messages, melodies, and live public address to an unlimited number of SelecTone Amplified Speakers.

Typical applications for SelecTone include emergency warning, plant evacuation, start and dismissal, public address, and process control signaling.
