

## Federal Signal Announces the New 10" Rotating Navigator®

The 10" rotating Navigator has a patented SLR rotator that optimizes LEDs for a true 360-degree light output and is configurable online with one or two LED colors. The 10" rotating Navigator has (2) rotating speeds built-in to every unit so users have the flexibility to choose from 90 RPM or 120 RPM. An optional oscillate function can be activated to the front via a dip switch while using the 120 RPM function. The rotator is powered by a gearless motor that extends product durability and is backed by five-year LED warranty

### FEATURES

- SpectraLux™ multi-color SLR LED Rotator
- Solaris® LED reflector technology
- Two-color capability with LED colors in Amber, Blue, Green, Red and White (see modes of operation chart)
- Two functions - 90 RPM and 120 RPM/OSC
