SAFETY MESSAGE TO INSTALLERS

⚠️ WARNING

People’s lives depend on your safe installation of our products. It is important to read, understand and follow all instructions shipped with this product and the related add-on products. In addition, listed below are some other important safety instructions and precautions you should follow:

- To properly install this light: you must have a good understanding of automotive electrical procedures and systems, along with proficiency in the installation and use of safety warning equipment.
- When drilling into a vehicle structure, be sure that both sides of the surface are clear of anything that could be damaged. Remove all burrs from drilled holes. To prevent electrical shorts, grommet all drilled holes through which wiring passes.
- A light system is a high current device. In order for it to function properly, a separate ground connection must be made. If practical, it should be connected to the negative battery terminal. At a minimum, it may be attached to a solid metal body or chassis part that will provide an effective ground path as long as the light is to be used.
- This product may contain high intensity LED devices. To prevent eye damage, DO NOT stare into the light beam at close range.
- High voltages are present inside the strobe light equipped models during and after operation. Ensure that power is disconnected and wait at least ten minutes before removing the dome.
- Locate light system controls so the VEHICLE and CONTROLS can be operated safely under all driving conditions.
- You should frequently inspect the light to ensure that it is operating properly and that it is securely attached to the vehicle.
- File these instructions in a safe place and refer to them when maintaining and/or reinstalling the product.

Failure to follow all safety precautions and instructions may result in property damage, serious injury, or death to you or others.

I. GENERAL.

The Light Assembly comes from the factory with six (6) stationary light lenses, gaskets and mounting hardware in kit form. This enables the user to choose and install the color combination that best suits the application. The Light Assembly comes from the factory with six (6) black lenses, gaskets and mounting hardware in kit form which enables the user to cover the pod openings when optional lighting is not desired.

⚠️ WARNING

Using a lens colored differently than an LED will greatly reduce the light output, thereby reducing the effectiveness of the light for emergency signaling purposes. Either use a clear lens or match the color of the lens with the LED.

Federal recommends that lenses be installed prior to mounting the light assembly on the vehicle. To install a lens in any position, proceed as follows (see figure 1):

A. Install gasket on rim of lens.

B. Insert lens and gasket into lens opening. Secure with two #6 screws. Tighten to 10-15 in./lbs. of torque.

II. ELECTRICAL WIRING.

A. General.

⚠️ WARNING

To prevent personal injury and/or damage to vehicle components, in the event of a short-circuit in the power cable, install a fuse in each incoming cable conductor.
Any of the light assembly functions can be activated by applying 12VDC to the appropriate control line. The heavy black lead (-) must be connected to vehicle ground, to perform a function check.

The Light Assembly is completely wired at the factory and does not require any additional internal wiring. (If desired, to allow Intelli-Flash Mode 2, connect the wht/red Intelli-Flash wire to an unused power cable wire or a user-supplied wire.) The cable connected to the Light Assembly contains all the conductors necessary for proper control of all basic and optional functions. Figure 2 illustrates the function of each conductor in the cable. Be sure to use fuses (current ratings shown in figure 2), wire and switches with adequate current capacity for each function.

Figure 2 illustrates the external/internal Light Assembly wiring by function. Using figures 2 and 3 as a guide, make the appropriate electrical connections. Be sure to use fuses (current ratings shown in the diagram in figure 2), wire and switches with adequate current capacity for each function.

NOTE
When takedown lights or directional strobe lights are not used in the front and rear secondary light positions, alternating flash end lamps (35-watt halogen lamps) will be found in these positions.

B. Programming the Intelli-Flash (see figure 3).

To operate the flasher in Mode 1, close SW1. To operate the flasher in Mode 2, close SW1 and SW2.

Turn on the flasher in Mode 1. Short across the programming pins until the desired pattern is running. Allow the pattern to run for at least 15-seconds to program Mode 1.

Turn on the flasher in Mode 2. Short across the programming pins until the desired pattern is running. Allow the pattern to run for at least 15-seconds to program Mode 2.

III. MAINTENANCE.
A. Cleaning the Plastic Domes and Lenses.

WARNING
Crazing (cracking of domes or lenses) will cause reduced effectiveness of the light. Do not use cleaning agents (which will cause crazing) such as strong detergents, solvents, or petroleum products. If crazing of domes or lenses does occur, reliability of light for emergency signaling purposes may be reduced until domes or lenses are replaced.

Ordinary cleaning of the plastic domes and lenses can be accomplished by using mild soap and a soft rag. Should fine scratches or a haze appear on the domes, they can ordinarily be removed with a non-abrasive, high quality, one-step, automotive paste cleaner/wax and a soft cloth.

B. Lamp Replacement.

1. Dome Removal (see figure 4).
   a. Turn-off power to Light Assembly.
   b. Remove three #10 type “B” hex washer head thread-forming screws which secure the upper speaker grille to the lower speaker grille. Lift upper grille away from lower grille.
   c. Remove the eight (four on each side) #8-32 x 7/8” hex head screws and #8 flat washers from the front and rear edges of the dome.
   d. Carefully remove the domes. Ensure that the bulkhead gasket remains tucked in its groove.
   e. The domes and upper speaker grille can be replaced by reversing the procedure. Torque dome screws to 14-18 in./lbs and grille screws to 20-25 in./lbs.

**290A2899B**
**WARNING**

A serious injury may result if lamp is touched when hot. Always allow lamp to cool before removing. Halogen lamps are pressurized and if broken can result in flying glass. Always wear gloves and eye protection when handling the lamps.

2. Primary Rotating Lamps.

To replace the halogen lamp, proceed as follows (see figure 5):

**CAUTION**

Forced rotation of the light mechanism will cause damage to the worm gear. ALWAYS rotate the light mechanism by rotating the motor shaft.

a. Rotate the reflector until the lamp clip (located at the base of the lamp) can be removed, and remove the clip by sliding it away from the reflector.

b. Note the lamp's orientation and pull the defective lamp and connector out of the socket.

c. Replace the defective lamp with a new H-1 halogen lamp (Part No. 8440A265A). When reassembling, ensure that the lamp is secured to the connector and that the clip is properly seated in the grooves on the lamp socket.

3. Omni-Directional Strobe Tube.

Remove fresnel lens from base. Pull defective flash tube from mounting socket. Replace with Part No. 8422A420 flash tube.

To replace lamps in the secondary light positions (six locations), proceed as follows (see figure 1):

a. Remove the two #6 pan head screws.

b. Remove lens by pulling straight out. Remove lens gasket.

c. Replace defective lamp with proper lamp only. Refer to Table 1, Secondary Lamp Replacement Guide.

d. Reinstall lens and gasket. Secure with two #6 screws removed in step a.

5. Gen III PCB Assembly Replacement.

a. Remove the domes.

b. See figure 6. Disconnect the electrical connector from the PCB assembly.

c. Gently pry the PCB assembly from the snap-top standoffs on the backplane.

d. Remove the two heat sink retaining screws and the heat sink.
Table 1. Secondary Lamp Replacement Guide.

NOTE: If the alternating flash feature is desired, the flasher supplied with the Alternating Flasher Kit is required.

Prior to installation of the PCB assembly, ensure that the LED connector pins on the PCB are not bent or damaged.

   a. Remove the domes.
   b. See figure 6. Disconnect the electrical connector from the PCB assembly.
   c. Gently pry the PCB assembly from the snap-top standoffs on the backplane.
   d. Remove the device from the light bar.
   e. See figure 7. Remove and discard the Rivscrews retaining the LED module to the backplane. Remove the LED module.
   f. Unlatch the Fresnel lens from the LED module.
   g. Snap the Fresnel lens onto the new module. Make sure the rectangular recess in the lens aligns with the black connector on the new LED module.
   h. Position the LED module on the backplane, aligning the black connector on the LED with the large clearance hole in the backplane. Secure the module with the 2 #6-32 screws provided.
   i. Remainder is the reverse of disassembly.

7. Fresnel Lens Replacement.
   Same as LED Module Replacement above, except that the Rivscrews must be retained for reuse if a new LED module is not being installed.
C. **Worm Gear and Bearing.**

All gears should be greased at least twice a year. Use medium consistency Dow Corning DC33 or equivalent type grease. Proceed as follows (see figure 8):

1. Remove lamp and clip from rotating light.
2. Lift-off reflector and worm gear. Lubricate with grease as shown in figure 8.
3. Replace parts by performing the above procedure in reverse order.

**NOTE**

When reassembling, ensure that the lamp is secured to the connector and that the clip is properly seated in the grooves on the lamp socket.

D. **Motor.**

1. Before attempting to service the motor, ensure that the worm gear and worm are free of binding.
2. There should be a small amount of gear backlash for proper motor operation.
3. Replace motor if operation is sluggish or intermittent, after it has been determined that there is no binding and that all electrical connections are correct.

E. **Service Parts Kits.**

Service Parts Kits and Instructions are available for these lights. Contact your local Distributor for more information.
