Update: 357 | 06/30/10

## Rumbler® Product Enhancements

Federal Signal is pleased to announce several product enhancements to the Rumbler intersection clearing system.

- Voltage sensing allows Rumbler to generate the low frequency waveform with no adjustment necessary – This allows for faster installation and increased reliability.
- Current sensing prevents Rumbler operation should main speaker fail.
- External rotary dip switch allows user to adjust time range from 8 to 60 seconds without opening amplifier.
- The bands that mount the speakers to the vehicle are now composed of two pieces. The band was widened from .875" to 1.80", and is no longer being fed through the cradles, but underneath them. This provides a stronger hold for the speakers and increases reliable installation.

Complete installation instructions, may be found on our website at [www.fedsig.com/tech\\_support](http://www.fedsig.com/tech_support).

NOTE: Rumbler model has also changed to RUMBLER-3. List pricing remains the same and has not changed.

Model #	Description	2010 List Price (US\$)
RUMBLER-3	Rumbler Traffic Clearing System, amplifier, speakers, mounting bands, hardware kit	\$638.00
RB-CVIC05	Kit, pair of mount brackets for Ford Crown Victoria Police package vehicles	42.25
RB-ES08	Kit, pair of mount brackets for 2008 Ford E-series Chassis	42.25

To order a Rumbler system, please contact your local sales representative or call 1-800-264-3578.

*Speaker bands have been split and the width increased to improve hold on speakers.*
