Introducing New Brackets for Rumbler

Federal Signal is pleased to announce several new brackets for Rumbler intersection clearing systems. Each new bracket kit has been designed to mount in specific vehicles, making installation simpler and more efficient.

The Rumbler Intersection Clearing System upgrades user safety and siren effectiveness through the use of low frequency tones. Low frequency tones have the distinct advantage of penetrating and shaking solid materials allowing vehicle operators and nearby pedestrians to FEEL the sound waves, and perhaps even see their effects through a shaking rearview mirror.
