

371LED/371LEDX

CRANE REFLECTOR KIT NOW AVAILABLE FOR THE 371LED AND 371LEDX

FEATURES

- Available in 120VAC
- Five lamp/lens colors: Amber, Blue, Clear, Green and Red
- 50,000 hour LED

Federal Signal is excited to announce that the 371LED / 371LEDX Crane Reflector Kit is now available to order. When installed in a 371LED or 371LEDX rotating light, the new reflector allows the light beam to be reflected at a 22.5-degree angle from the vertical orientation. This feature is particularly useful for overhead mounting and other applications where focused light output is desired.

The Commander rotating lights are available in safe area and hazardous location models with Amber, Blue, Clear, Green and Red lens color options. The LEDs, reflector and motor module are sealed under a polycarbonate dome which completes a water-tight, dust-tight enclosure. The base features electrostatically applied black powder paint for greater corrosion resistance. Wiring for the light can be conveniently routed through the pipe-mount opening at the bottom, or through the two side knockouts for side entry wiring. Installation options include surface mounting or 1-inch NPT pipe mounting. Additionally, optional wall and corner mount brackets are available for added versatility.

371LED / 371LEDX is shipped from the factory with the standard reflector that creates a horizontal light beam that is 90-degrees from the vertical orientation resulting in a wide light output distribution.

371LED / 371LEDX with the 371LED-KIT-CR reflector installed reflects the light beam at 22.5-degrees from the vertical orientation resulting in a focused light output
