

COMMANDERONE®

NEW FEATURE: LIGHTNING VIEW

In keeping with Federal Signal's dedication to adding features and value to CommanderOne®, all newly created CommanderOne accounts will have Lightning View enabled. This feature allows you to see live cloud-to-ground and cloud-to-cloud lightning strikes in the continental US.

If interested in adding the ability to alert based on lightning data, customers can add Lightning Alerting to their CommanderOne account. With Lightning Alerting, you can choose a point, like a public park or industrial plant, and then define radii around that point with appropriate actions.

Scenario:

Emergency Manager:
Lightning has breached the 10-mile radius. I need to alert all employees to be prepared to stop elevated work.

Emergency Manager:
Lightning has breached the 5-mile radius I need to activate the audible alarms to let all employees know to stop all elevated work and proceed to shelter.

Lightning View will be rolled out to all existing CommanderOne customers over the next few months in phases.

For further information, please visit our website at www.fedsig.com/product/commanderone-lightning-alerting or contact your local Federal Signal Sales Representative.
