

COMMANDER® ON-PREMISES SIREN CONTROL AND MONITORING SYSTEM

NEW RELEASE OF COMMANDER® ON-PREMISES AND COMMANDER® CLIENT SOFTWARE

Version 16.3.0.28 of Commander® On-Premises Siren Control and Monitoring System is now available. This update supersedes all previous standard product releases.

New Features:

- Add ability to configure Hotkey text colors
- Commander Hotkey/Template Queue (Allows stacked entries with streaming VOIP functions)

Improvements:

- Improved VOIP audio streaming
- Improve CommanderIP configuration error detection and correction capabilities
- Update installer to allow offline installation without valid maintenance
- Software Upgrade Log - Log software updates performed by the Update Tool in System Log
- Add Commander Client modal window to notify user, generate audible alert and prevent Client use when disconnected from Server
- Display error message if activation is attempted when client is disconnected
- CommanderClient - Sound chime audio every 5 seconds when client is disconnected from server
- CommanderClient - Auto-refresh System Alarm status window and update desktop icon
- Fill Commander screen with Commander background image when Commander is minimized
- Modbus - Added Hotkeys 31 - 50 to Modbus register map
- Auto-refresh System Alarm dialog
- Added error checks and warnings for COM port settings in System Setup

Changes:

- Rename type "FCD 2001 24vdc" to "FCD 24vdc"
- Change "UCT Whelen® Rot" to "UCT Whelen® Rotating" and allow >5 functions

Bug Fixes:

- Prevent Client application crash if Client left connected for >24 hours
- Fixed zone configuration issue in 16.3.0.16

TIMING
