

FSF SERIES FIRE ALARM PULL STATIONS

INTRODUCING THE NEW FSF SERIES

Federal Signal is proud to expand its industrial signaling lineup with the FSF Series Fire Alarm Pull Stations. Built for instant recognition and dependable performance, these durable pull stations are engineered to deliver reliable operation in the most demanding environments.

Applications for the FSF Series include:

- **FSF103:** A single-action pull station that activates by pulling down a high-visibility T-handle, providing fast, intuitive alarm initiation.
- **FSF103-WP:** A single-action application that utilizes a weatherproof backbox and a NEMA 4X outdoor rating for use in harsh environmental conditions.
- **FSF102:** A dual-action pull station that requires the user to lift a metal cover before pulling the T-handle. This two-step operation helps reduce accidental or malicious false alarms, while maintaining ease of use during emergencies.
- **FSF101-EXP:** An explosion-proof pull station designed for hazardous locations where flammable gases, vapors, and combustible dust or easily ignitable fibers are present, such as offshore oil facilities, gas production, and refineries.

Designed for durability and dependable performance, these pull stations provide clear, reliable alarm activation in industrial, commercial, municipal, and educational environments.

HOW TO ORDER

MODEL	DESCRIPTION	UPC
FSF103	Indoor, Single Action	782979107613
FSF103-WP	Type 4X, Single Action	782979107620
FSF102	Indoor, Dual Action	782979107606
FSF101-EXP	Explosion Proof, Single Action	782979107590
