

COMMANDER® ON-PREMISES SIREN CONTROL AND MONITORING SYSTEM

NEW RELEASE OF COMMANDER® ON-PREMISES AND COMMANDER® CLIENT SOFTWARE

Version 16.3.0.44 of Commander® On-Premises Siren Control and Monitoring System is now available. This update supersedes all previous standard product releases.

New Features:

- DTMF Duotone: Add DTMF and Duotone encoding support for SS2000+ IP channels
- Power Attenuation: Add 34db and 40db attenuation options for IP15 (V3+), IP100 (V6+), and RF100 (V2+) models

Improvements:

- Base Polling: Add ability to poll base sites 900-999
- CommanderIP Status screen: Display the connection status of each IP connection to the RTU
- Security Keys: Update previous keyset when another CCU updates the security key
- RTU Copy and Delete: Reduce execution time - Create "crash_dump.dmp" file in the C:\ProgramData\FederalSignal\Commander\logs folder for debugging critical program errors

Bug Fixes:

- DTMF/Duotone Encoder dll: Added additional compatibility options
- Backup: Changed backup utility to improve security setting compatibility
- Auto Activation: Time wasn't saving for the first Holiday
- Wavefile Uploads: Improved reliability of wavefile transmission
- Auto Activation: Prevented Before and After radio button changes from clearing the recurrence setting

TIMING
